

Water Usage in Livestock

Yes, you eat
3496 litres of
water
EVERYDAY.
and you don't know it

BEEF

It takes about 3 years before a cow is slaughtered to produce about **200** kilos of boneless beef.

During the 3 years, the cow consumes

1300^{kg}
of grains

1200^{kg}
of roughages

which require
3,060,000
liters of water to produce

+ another
7000
liters to service

the farmhouse

the slaughtering process

In Total, we need

3,091,000

liters of water to product

200 kilos of boneless beef

So for 1 kilo of beef,
we need

15400
liters of water
